

connect your world.

Shape the next-generation industry & invest in the first Digital Life Network in Virtual Reality.

What is connect?

connect is a **digital life network** app in a virtual reality (VR) world that can be individually customized. It can be used with any device and is **available in both 3D and 2D** so that you can use it with or without VR hardware.

connect's **multi-messenger** combines sms, emails, messages from other networks and connect in one area. Key functions are the ability to take photos, listen to music, read magazines/books, stream videos/TV and – in the near future – online shopping in VR.

Why connect and your investment will be successful?

connect combines two fast-growing markets: Social Media and VR. Due to the impressive high-quality 3D design and the possibility for the user to customize their connect world, a unique customer experience can be provided. We enable a seamless connection between the connect world, other key applications on the user's devices, media and reality.

connect guarantees full data security and privacy because VR and Augmented Reality have much higher data security requirements than all previous networks.

What makes connect so unique?

Feels like home.

Users can fully customize the features and the design of their connect world.

Explore your world.

connect is the first Digital Life Network in virtual reality (VR) which you can use both in 3D and 2D.

Easy and smart.

An intuitive and fun experience with easy navigation. The focus is not on text but on 3D objects familiar to the user. It works on your smartphone, tablet, PC, Mac and soon also on PlayStation.

Free for everybody.

Only optional add-ons that are not essential for any functional features, like virtual pets, are not complimentary.

You are not alone.

Multi-Messenger users can reach their Facebook, WhatsApp & Co friends from their connect world even if their friends don't use connect.

Enjoy entertainment.

Utilize any media in the world that is included in the app - from video and audio to online and print media.

Your data is safe.

Our business model is not based on selling data. Rather we fully guarantee an end-to-end encryption.
